KOOTENAY NATIONAL PARK
Kootenay National Park is a land of startling contrasts: towering peaks and subalpine forests, narrow canyons and mountain waterfalls. This 1,807 km² (700 square mile) mountain park, located in southeastern British Columbia on the western slopes of the Rocky Mountains, contains one of the most significant shale formations in the world. The Kootenay National Park is an excellent opportunity to explore the history of the region, particularly in the Main Ranges. The most significant sites in the park are Marble Canyon, Kootenay Park, and the Redwall Fault with its ochre-tinted paint pots used by the Kootenai Indians to make vermilion paint.

Yoho NATIONAL PARK
Yoho’s craggy peaks and steep rock faces, home to mountain goats and grizzly bears, are often seen in their natural habitat by visitors. Early summer is a good time to see the majestic American bison of Yoho National Park. The park is home to a variety of wildlife, including moose, elk, and deer, which are often seen in their natural habitat.

INTRODUCTION
The Banff-Jasper-Yoho National Park area is located in the Canadian Rockies, a region characterized by its stunning natural beauty and rich history. The area is home to a diverse range of wildlife, including grizzly bears, elk, and Rocky Mountain bighorn sheep. The national parks are open all year, although many services are not available from October to May. Many visitors come to the park in the summer months to enjoy the hiking, camping, and other outdoor activities.

WILDLIFE
Wolves are an important and endangered species in the area, and efforts are being made to protect them. The park is home to a variety of bird species, including the Canada goose, the bald eagle, and the snowy owl.

A special note about wildlife
All wildlife in the park are protected and are subject to legal restrictions. Visitors are asked to observe the wildlife from a safe distance and not to disturb them.

PLANT LIFE
The plant life in the park is diverse, with a variety of coniferous and deciduous trees. The most common trees are the lodgepole pine, the Engelmann spruce, and the subalpine fir. The park is home to a variety of wildflowers, including the yellow larkspur, the Rocky Mountain penstemon, and the alpine aster.

CLIMATE
The climate in the park is characterized by extremes, with hot summers and cold winters. The summers are short and cool, and the winters are long and snowy. The park is home to a variety of ecosystems, including alpine meadows, subalpine forests, and mountain tundra.

HISTORY
The Banff-Jasper-Yoho National Parks have a long and complex history. The area was first explored by fur traders in the early 19th century, and the first permanent settlement was established in the late 19th century. The area was first designated as a national park in 1885, and it has been managed by Parks Canada ever since.

WHERE TO STAY
The national parks are open all year, although many services are not available from October to May. Many visitors come to the park in the summer months to enjoy the hiking, camping, and other outdoor activities.
