CONSERVING

FOR THE FUTURE

THE CHALLENGE

How can we measure the health of Canada's protected areas?

Ecosystems respond differently to shocks and disruptions brought about by climate change. Recording data on hundreds of thousands of insect species across Canada's national parks can reveal a lot about the state of these ecosystems.

A STEP IN THE RIGHT DIRECTION

Volunteers and scientists have found more than 725,000 specimens to scan using the Guelph Centre for Biodiversity Genetics' *Barcode of Life*.

THE RESULT?

Scientists now have a baseline to track long-term shifts in species.

GET INVOLVED

NOW IT'S YOUR TURN

CHRISTMAS BIRD COUNT
