BANFF THE BEAUTIFUL.

BANFF, in the heart of the Rocky Mountains, is charmingly situated in the Canadian National Park, a large reservation chosen by the Dominion government for its beauty and sublimity and healthfulness as the great breathing place of the nation. Few places have found such speedy recognition of their attractive novelties, and none have better deserved the encomiums of enthusiastic tourists. Banff is *sui generis*, but in its kind cannot be excelled, for of all the lovely spots that gem the American continent, it stands alone without a rival. Its surroundings are the mountain steeps, beside whose immense, jagged heights the crags and peaks of the Alps sink into insignificance. It is not a question of one mountain or of two, but more than can be counted, for they stretch far away as the eye can follow them, and roll upon one another in chaotic disorder. The very acme of sublimity and grandeur is reached, and in its natural beauty Banff finds no counterpart in other lands. In the centre of this magnificent panorama are the Banff hot springs—some natural wells of mineral water having peculiar medicinal qualities—and here the Canadian Pacific Railway Company, whose transcontinental lines traverse the park, has erected a large and luxuriously appointed hotel, perched on a lofty promontory, commanding not only an uninterrupted view of the Bow Valley, but of peaks and stretches of the Rockies in other directions. In the surrounding country, for many miles, science has availed itself of nature's lavish gifts to create, out of the wilderness, a mountain park, twenty-six miles long by ten wide—a public pleasure ground without an equal. Streams have been bridged, roads laid out and trails cut, penetrating for miles into the solitudes, so that in many directions the visitors may drive, ride, wheel, or wander afoot, inhaling the health-giving mountain air, or seeking the most favorable spots for brush, pencil, kodak, rod or gun. There is fairly good trout fishing in the bright and rapid Bow in the valley beneath the hotel, and good trolling on Devil's Lake, a pleasant drive of nine miles from the hotel. Steam launches, besides boats and canoes, have been placed on the Bow River for the use of visitors, enabling them to make excursions on the river and to Vermilion Lake. In the immediate vicinity there are

numerous lakes at which, in season, good duck shooting is obtainable, and, for the more adventurous, the mountain sheep (big horn) and mountain goat, at some distance, offer a temptation to which men who have gained other laurels in the sporting world are glad to yield.

BANFF HOTEL FROM OVER THE BOW RIVER.

An excellent museum, containing innumerable specimens of the flora, fauna, etc., of the park, has been established by the Dominion government, and in its pleasant rooms the student of nature will find many objects of peculiar interest to him. Of this institution, Lord Lister, physician extraordinary to the Queen, and ex-President of the British Scientific Association wrote, on the occasion of visiting the institution: "We have been much interested in the museum, which has supplied us with valuable information regarding the birds and animals which we have observed in the districts of the Rocky Mountains." In a large enclosure near the railway station is a herd of buffalo, being among the last of the pitifully few remaining bison that once roamed the great western plains in countless thousands.

The Medicinal Hot Springs.

Though Banff is chiefly a resort of tourists and pleasure seekers, its waters have properties that are commended strongly by medical men. Dr. Lanter, a former president of the American Health Resort Association, says: "The springs are natural hot sulphur water, combining other chemical ingredients, and while the air is a restorer to the pulmonary diseased, the springs are particularly beneficial to rheumatic patients and to those afflicted in some other ways." Mr. McGill, assistant analyst of the Canadian government, who recently made a full analysis of the Banff water supplies, reports: "The water is very free from organic impurities and gives no albuminoid nitrogen. * * * Each gallon contains dissolved sulphuretted hydrogen to the amount of 0.3 grains (equivalent to 0.8 cubic inch).

"The dissolved solids are as follows:—

Chlorine (in chlorides)	0.42	grains.
Sulphuric Acid (S O ₃)	38.50	"
Silica (Si O ₂)	2.14	"
Lime (Ca O)	24.85	"
Magnesia (Mg O)	4.87	"
Alkalies (as Soda, Na ₂ O)	0.62	"
Lithium		A decided trace.

Analyst McGill reports that the quantity of lithium present is at least one hundred times as much in the Banff water as in some of the so-called lithia waters placed on the market. The temperature of this spring is 114.3 degrees Fahrenheit.

Patients are sent here to bathe in the hot sulphur baths; and these are none the less appreciated from the circumstance of their being an annex of a hotel which, though situated in the wildest part of the continent, is, in its appointments and luxurious accessories, as if in the midst of eastern civilization. There are many hotels, indeed, in the leading cities of this continent which, pluming themselves upon being distinguished houses, are excelled by Banff in many things that make the reputation of a hotel.

The Climate.

The climate of Banff during the summer months is delightful, and while, as in all high altitudes, the nights are chilly, the days are warm

and pleasant, with plenty of genial sunshine and very little wind or rain. The following table is taken from the official records of the local meteorological station:—

MONTHLY AND ANNUAL SUMMARIES FOR THE YEAR 1898.

NOTE.—Barometer not reduced to sea level.

Around About Banff.

Nine miles from Banff is Lake Minnewanka, or the Devil's Lake, a drive to which, over an excellent road, affords a pleasant outing. The lake is deeply set in a mountain fastness, the bare rocks rising sheer from the water's edge to great heights, and at its further end a chalet inn is being erected, which will afford a comfortable rendezvous for those wishing to spend a day or longer here. There is a capacious launch, and there are boats and canoes on the lake, and the fishing is particularly good. The natural cave and basin in which are sulphur springs; the Bow Falls at the confluence of two mountain streams in the valley beneath the hotel; the hot springs on Sulphur Mountain; the Loop, a beautiful drive around the Bow Valley; the Spray ride up the Spray Valley and through the virgin forest to the Spray Cañon at the foot of Goat Mountain; the Sun Dance Cañon, a remarkable cleft in the mountain; and the crest of Tunnel Mountain, reached by a spiral drive, are some of the more noted points that attract the tourist who rests awhile at Banff.

Those who like making little scenic discoveries for themselves, or fishermen who love to work in solitude without fear of companionship, can find numerous spots where they may indulge in unbroken reveries, and by a little exercise of fancy imagine themselves discoverers of the

SWISS GUIDES IN THE ROCKIES.

CASCADE MOUNTAIN FROM TUNNEL MOUNTAIN, BANFF.

wilds before and around them, and monarchs of all they survey, and this within a short distance of the hotel. For the more adventurous there are still more pretentious trips—to Mount Assiniboine, which is called the Matterhorn of the Rockies, a tempting height to scale, twenty miles south of Banff, and reached by Simpson's or the White Man's Pass; or up past the ice-fields due west of Laggan and through the Howe Pass to the culminating heights of the range; but these involve weeks to reach and exploit.

Guests at Banff, in addition to riding, driving, wheeling, fishing, boating, bathing and mountain climbing, also find amusement in lawn tennis, golf, billiards, bowling, etc. Connected with the hotel are new and elegantly appointed bathing houses and a large plunge bath supplied with water direct from the sulphur springs, and in the hotel a dark room is provided for the use of photographers who desire to finish their pictures before returning home. Alpenstocks for mountain climbers can be purchased at Banff, Lake Louise, and Glacier, at each of which place there are facilities for branding upon them the names of the different peaks in their neighborhood, thus converting the staffs into interesting souvenirs. Guides and the necessary outfit for parties exploring the mountains or shooting in the Selkirks and foothills of the northern

Rockies are procurable at Banff. The hotel opens on May 15th and closes October 1st, and the rates are from \$3.00 to \$4.50 per day (with a reduction for those stopping a week or longer), a moderate charge for such a hotel in such a locality.

Swiss Guides.

Experienced Swiss guides are stationed at the hotel during the tourist season, and under their personal guidance systematically planned excursions will be made daily to several of these or other points of interest, so that in a comparatively short stay the visitor is enabled to explore the region hereabouts under the most favorable auspices. Each day's programme will be posted in the rotunda of the hotel on the evening previous, and will be so arranged that the greatest number of interesting places will be visited with the least amount of travel.

The Lakes in the Clouds.

Not far from Banff are the Lakes in the Clouds. So near and yet so dissimilar are these two charming spots that, one having been seen, there is naturally a desire to visit the other. If Banff is beautiful, these lakes are enchanting. There is nothing like them on the face of the earth elsewhere than here in the Rockies, where they lie like a string of jewels in the clefts. The trip from Banff is through one of the grandest parts of the whole mountain region — up the forested valley of the Bow, skirting the Vermillion Lakes and passing out of the National Park past Castle Mountain, a sheer precipice of 5,000 feet, with views of the Sawback range on the right and the Bow range on the left, and Lefroy lifting its whitened head above the surrounding heights. The station on the Canadian Pacific line for the Lakes in the Clouds is Laggan (thirty-four miles west of Banff — about an hour's ride), where choice can be made of driving, riding or walking up to Lake Louise (altitude, 5,645 feet), the first to be reached of the three sheets of water hidden high up above the valley.

Lake Louise.

The drive is two and one-half miles through a pine forest, in which a good carriage road has been cut, following up Louise Creek, which carries off the waters of the Cloudland Lakes to the Bow. Although the most graphic word-painting does not adequately convey the effect of the approach to Lake Louise and its sudden burst on the sight of the traveller, for mental pictures involve themselves with actual sights, it may be worth while quoting one writer: —

"Nestling at the foot of two great mountains, which seem to guard against the encroachments of the vast glaciers resting on the sides of a third, canopied by a sky like the petal of a soft blush rose, its great depths reproducing, with mirror-like fidelity, the green forests, bare peaks and motionless seas of snow-mantled ice — Lake Louise is a dream of loveliness. The delicate colorings of its waters are an irresistible charm. The lake is about one and one-half miles in length, with a

MAP OF LAKES IN THE CLOUDS.

width of half a mile, and it is between 500 and 600 feet deep. To the right is a vast amphitheatre of spruce, whose tall heads rise up in a terraced evenness to the foot of the Beehive, and through whose intricacies are passes to the upper lakes. Between the two great mountains is Mount Victoria, a back-setting of gray and white — the ice-fields, the one at the base being covered with the drift of centuries. These glaciers are of enormous thickness and of great area, and with the coursing of the sun or the passing of clouds, present new shapes and fantastic forms, and, as the rays of old Sol pour down, the stillness of the air is broken by the crunching and grinding of the ice beds. The base of Goat Mountain, on the left, is clad with spruce on one side, and beautiful fresh foliage embellishes another, which, in the fall of the year, is rich with the autumnal tints peculiar to American woods, while above there are huge precipices of bare rock, which come sheer down for thousands

LAKE LOUISE AND CHALET

of feet. These walls are varicolored, resembling marble in places, whose tinted hues are in pleasing contrast with the dull dun and gray rock and the dark slate."

"To row out on the lake in the early morning," adds another visitor, "is a never-to-be-forgotten experience. The boat seems poised in mid-air, surrounded above and below by the mountains and sky. Away from it, stretching out on all sides, is the wonderfully clear, silvery blue-green water. The oars touch its sheen, the boat moves gently forward, and grounds at length on a tiny sandy beach at the opposite end of the lake from that on which the chalet is situated. On the shore just beyond the beach and below the glacier is a flower garden of blue forget-me-nots. As we gather them we are frequently startled by peals like those of heavy thunder, though we are under clear skies; but we soon discover that the sounds are caused by the falling masses of the hanging glaciers plunging over the distant cliffs of Mount Victoria."

On the margin of the lake the railway company has built a chalet, which is under the same management as the Banff Springs Hotel, for those who desire to remain either to explore the mountains or to fish or hunt—the region abounding in mountain goat, which require all the skill and perseverance of the Swiss chamois hunter, and numerous coveys of ptarmigan grouse, duck, and other feathered game—and at Lake Agnes and the Saddleback, shelters have been erected for the accom-

modation of visitors. Streams have been bridged, and over twelve miles of trails have been constructed, which render many points of vantage easily accessible. One leads around the west side of the lake to the base of Victoria Glacier, three and one-quarter miles; another to Saddleback Mountain, overlooking Paradise Valley, and to Annette Lake in the Valley itself, giving magnificent views of groups of rugged peaks and clusters of smaller glaciers; others lead to the upper lakes—Mirror and Agnes. Ponies are available for these ascents by those not desiring the walk; but the delights of mountain climbing, which are here lavishly offered, prompt many to indulge in that pleasurable experience which, except to the feeble, is unattended with difficulty. The charge for ponies is \$1.00 per day, and experienced Swiss guides arrange for and accompany excursions daily, as at Banff, for the convenience of guests. The chalet is open from about June 15th to September 15th, the rate being \$2.50 per day. Conveyances meet all trains at Laggan, and by pre-arrangement the round trip, including the ascent to the upper lakes, can be made from Banff in one day, single-fare tickets being issued on presentation of certificates from the managers of the Banff Springs Hotel or Sanitarium. In the chalet is a dark room for the use of photographers, and there is telephonic connection with the station at Laggan, by which communication with Banff is had.

Mirror Lake.

The ascent to Lakes Mirror (altitude 6,550 feet) and Agnes (altitude 6,820 feet), the one on the breast and the other on the shoulder of the mountain that confines Lake Louise on the southern side, is usually made on Indian ponies, but with sturdy climbing powers one can scramble up the steep ascent without any great waste of time or exertion. A trail, completed in 1897, which brings Mirror Lake within two miles of the chalet and Lake Agnes two and one-quarter miles, leads on to the summit of the Beehive; another branches off near Mirror to the Lesser Beehive and the base of St. Piron, from which its summit can be reached. Four hours are occupied from the chalet to the crest or St. Piron and return, and two hours to Lake Agnes and return. Mirror Lake, which is one-third of a mile long by a quarter of a mile wide, has no visible outlet, its shallow waters escaping through an underground channel into Lake Louise. They rise and fall as the inflowing streams pour their floods more rapidly than they are carried off. Its still and clear surface, differing in color from that of Lake Louise and of Lake Agnes, reflects in a peculiarly effective way its encircling walls, and suggested the appropriate name of Mirror Lake. Anxious to reach the highest point, the visitor shortens his stay at the intermediate water, and, remounting his pony or grasping his alpenstock, continues his ascent to Lake Agnes, there being two trails, one a ten minutes' easy climb and the other around the sloping side of the mountain, which, while not at all dangerous, is at times attended with all the pleasurable sensations of excitement.

Lake Agnes.

Rare is the beauty of the crystal pool known as Lake Agnes, although its surroundings do not possess that loveliness which characterizes its sister lakes. It is about a third of a mile in length, with half that breadth, and its great depths have not yet been ascertained. It is fed by several waterfalls, dropping from the heights above, and from numerous springs and great banks of snow which line the mountains that enclose it. Near its outlet, where the waters pour in a pretty cascade over the rocks and fall into the gorge which leads to Mirror Lake, is a clump of trees, in whose shade is Table Rock, affording a splendid

VICTORIA GLACIER AND HAZEL PEAK.

dining-table for picnickers. Like a sentinel, on the other side, stands grim Mount Whyte, and irregular peaks, running back, tell of the succession of violent eruptions in that awful day of the great upheaval, far back in the dim, misty ages of antiquity. The peaks rise up in terraces, reaching far above the timber line, and at the base are huge heaps of moraine. Further on is a vast amphitheatre-shaped basin, in which lie the accumulations of the snows of ages past. Here, even in the warmest weather, it is always cool and pleasant, and by a few further steps (for you are nearing the verge of vegetation), the pastime of a snowballing match can be indulged in — not five minutes after revelling amongst the

mosses, the forget-me-nots and the gentians which, with the heather of pink and white, dot the mountain side. Beyond the snow basin again the spruce, mixed with the tamarack, which here first shows its head, clothes the hillside at this height; the wood anemone, the sweet little blue bells of the Scottish highlands, the fern, the Alpine edelweiss—the bridal flower of the Swiss mountaineer—and the heather that reminds the sons and daughters of bonnie Scotland of their native land, and other brilliant-hued flowers, add beauty to the scene. The shortest and not least pointed description of these lakes was given by the lady who called them "a necklet of gems on the bosom of the mountain."

The return to Laggan is of course made in comparatively short time, and the east-bound transcontinental train is either taken for Banff, to which the tourist returns charmed with his excursion, and thoroughly appreciative of the comfortable home that awaits him, or the west-bound express, if one purposes exploring the other splendors of the mountains, which can be best done from Field, the Great Glaciers of the Selkicks, Revelstoke, on the Columbia, and North Bend, on the Fraser, where the Canadian Pacific Railway Company has erected four chalet hotels, as they are called, at any of which a tourist will find such comfort as is not generally dreamed of in the mountains. These chalets, unlike that at Lake Louise, are hotels at which tourists may, and usually do, stop for some time.

Field.

From Laggan, the railway climbs up the summit of the Rockies, crosses "The Great Divide," and ten miles down the western slope reaches the first of these chalets—the Mount Stephen House at Field. It is a delightful spot. The loftiest mountains of the Rockies are grouped all about, many of them bearing glaciers of great size, and they tower on every hand as far as the eye can see. These steeps are the haunts of mountain sheep, bear and other large game. In the background of the hotel is Mount Stephen, the highest point of the Rockies along the line (8,000 feet), which can be ascended from the rear, and around here artists, amateur and professional, find ample choice for the exercise of their brush. Near the base of this giant, and easily reached by a good trail, is an extensive fossil bed from which rare specimens can be obtained. Another walk takes one to the Crystal Cave, a place worth visiting, and to the silver mines perched 1,500 feet up on the side of the mountain; and to the west is a curious natural bridge. Other outings give grand views of the Ottertail range. Emerald Lake, a few miles away, which is reached by a foot-bridge over the Illecillewaet River, is a scenic gem of rarest beauty, not only attractive to the lover of nature but to the angler, for its waters and those of its tributaries are filled with lake and mountain trout.

The rates at the chalet at Field, and those at the Great Glacier,

Revelstoke and North Bend, all of which are open throughout the year, are \$3.00 per day; special arrangements, however, being made with those remaining a week or longer.

The Great Glacier.

In the heart of the Selkirks, the second great range of mountains, is the Great Glacier, one of the grandest marvels of nature, eighty-six miles beyond Mount Stephen. Within thirty minutes' walk of this wonderful sea of ice is the Glacier House, the popularity of which is such that the railway company has found it necessary to enlarge the original hotel, erect new buildings and increase the capacity of the annex, until now over one hundred guests can be comfortably accommodated.

The many attractions of the Great Glacier will doubtless puzzle the traveller who for the first time visits this most charming of spots. Visitors come year after year, so delighted are they with the splendour of the scenery, and one of them, Mr. George Vaux, Jr., of Philadelphia, furnishes a description which is of such general interest and usefulness, that the following excerpts are made from it:

The Great Glacier naturally claims attention first. The distance to the forefront of this frozen Niagara is one and one-half miles, there being a

MOUNT STEPHEN AND MOUNT STEPHEN HOUSE AT FIELD.

good trail crossing the Asulkan River, and following the Illecillewaet River, to which birth is given by the glacier, till the moraine is reached. One can here see how slowly but surely the ice-field has receded in the last ten years.

Another trail leads to Lake Marion, where a shelter is erected, and thence to Mount Abbott. The lake is about 1,750 feet above the hotel, and the distance by the trail, which is good, though steep in some places, is less than two miles. On the way up, exquisite views of Eagle Peak and Sir Donald are had through the trees, while a trail, skirting the north end of the lake, leads to Observation Point, whence superb views of Rogers Pass and the Loop Valley are obtained, with the silver thread of the Illecillewaet, flanked by the railroad, winding through the latter. The ascent from the lake to the summit of Mt. Abbott should be made by everyone at a pace equal to the exertion of a day's climb. With the improved condition of the trail, it is probable that with an early start the ascent may be more satisfactorily made in a single day. Another excellent trail is that to the top of the Cascade, and thence to the grassy slopes which culminate in the fine twin peak of Mt. Avalanche. The view is a superb one when the points outlined against the sky just above the snowsheds are reached, and in many respects rivals that from Abbott. The most striking object is, perhaps, Mt. Sir Donald, which rises as a square pyramid. Two sides of it are visible, and thus presents an entirely different aspect from that seen from any other point. From an

LOOKING OVER MIRROR LAKE AND LAKE LOUISE TOWARD BOW RIVER.

elbow about half way up the Cascade, where the trail reaches its most southern point, a fine view of the Great Glacier and its rough ice fall is had, and throughout, where it can be seen through the trees, the Asulkan Valley is most exquisitely beautiful. This trip should have a day devoted to it if possible, and the visitor is strongly urged on this, as on the other more extended trips, to make an early start. The morning light discloses beauties not dreamed of, and should the weather be warm, as it sometimes is, one gets the advantage of doing the hardest part of the work in the cool of the day. An early breakfast and a substantial lunch are always obtainable without difficulty. Possibly the most charming of any of the trips is that up the Asulkan Valley, a gem of Alpine beauty that was first explored in 1888. The name "Asulkan," given to this valley, with the glacier and pass at its southern end, is the Indian name for the mountain goat, which are at times found here in large numbers. The Asulkan Valley is hemmed in on its eastern side by Glacier Crest and the ridges running from it to the southward, which form the western side of the great Hecillewaet Névé, or snowfield. On its western side the valley is bounded by the long range which is comprised in order, beginning at the north of Mount Abbott — the Rampart, the Dome, Pollux and Castor. A series of glaciers sweep down from all of these except Abbott, and the streams flowing from them form a number of most graceful and beautiful waterfalls. The Seven Falls, so

THE GREAT GLACIER OF THE SELKIRKS

MARION LAKE, NEAR THE GREAT GLACIER

far unnamed in detail, at other places would be considered worthy of special attention. The rich meadows would prove tempting pastures for herds of cattle or flocks of goats. At the distance of two and one-half or three miles the river is contracted between narrow rocky walls, and the cañon sides here show no striking signs of glacial action. Emerging from the gorge, the path leads over an old moraine, across the stream flowing in from the east, and thence up a very steep grassy slope to the shelter erected for the accommodation of tourists. This point is about 2,000 feet above Glacier House, and about five miles distant from it. From about this level superb views of the Asulkan Glaciers are had, while the glaciers covering the sides of Castor and Pollux and the Dome are exceedingly striking. The ice-towers, pinnacles, obelisks, minarets and turrets are of surpassing grandeur and beauty, and the sight of them is an ample recompense to anyone who takes this trip, which, in fact, includes more variety than any of the others now easily accessible. Looking from near the shelter to the north, the Hermit Range is most beautifully set out, while nearer at hand and passing eastward come in order the minor peaks of Mt.

Avalanche, Eagle Peak and Sir Donald, the latter manifesting quite a different aspect from that seen from other positions. From the shelter the ridge may be followed upward for a mile or more, till sufficient elevation is obtained to observe the peaks of the Dawson Range. The total distance of the round trip is some twelve or fourteen miles, and the time occupied about the same number of hours. A variation of this trip is to follow upward along the crest of the great moraine just east of the Glacier, instead of climbing the grassy slopes to the shack. Later the Nêvé is crossed to the Asulkan Pass proper. The trip to Glacier Crest is not so often taken, but the view from the summit is well worth the excursion.

Other obvious walks are those along the Loop and to the snowsheds, whence the changing panoramas of peaks are ever new and ever attractive. The view of Mt. Bonney, which lies to the south of Ross Peak, as seen from the top of the Loop, is very beautiful. The visitor who spends a week or more will have his time pretty fully occupied if he includes all of the foregoing, and he will then find other and new fields for his investigations.

HERMIT RANGE, NEAR GLACIER HOUSE.

A Swiss guide is stationed here, who, as at Banff and the Lakes in the Clouds, will arrange the details and personally conduct daily excursions during the tourist season. Ponies, which are generally used here as pack animals, are obtainable at reasonable rates. At the hotel are many sources of amusement for guests—a tennis court, croquet lawn, billiard hall, bowling alley, and swings for children. A large telescope has also been placed at the hotel. The rates are \$3.00 per day, but rooms can be had *en suite* up to \$5.00 per day. Special arrangements are made with those remaining a week or longer.

Hotel Revelstoke.

Revelstoke is a newly-created city at the second crossing of the Columbia River, where the railway company has created the fine new Hotel Revelstoke, which occupies a high bench immediately in rear of the railway station. It is a delightful stopping place for those making the tour of the great West Kootenay mining region to the south, whose principal points are reached by the branch railways of the Canadian Pacific Railway, and its splendid fleet of modernly equipped steamers on the Columbia River and the Arrow, Slocan and Kootenay Lakes. The site of the Hotel Revelstoke commands splendid views of the Columbia Valley, of massive Mount Begbie and the Selkirk and Gold ranges.

ILLECILLEWAET VALLEY AND HERMIT RANGE.

The Fraser Canon House.

At North Bend, on the Fraser River, is the last of these mountain hotels—the Fraser Cañon House—and it is in all respects similar to the others. Here the incomparable wild flowers for which British Columbia is famed reach the highest perfection, and grow in wonderful profusion, making the spot one of unparalleled loveliness. The gardens and lawns of the hotel are perhaps the finest in Canada, and are a great attraction to the tourist. The hotel is in the immediate neighborhood of some of the most remarkable and furious reaches of the Fraser River, which for over fifty miles rushes through narrow and picturesque cañons, before reaching the fertile country of its delta below Yale, and makes a convenient base from which these wonders can be explored. There is a pretty series of cascades a short fifteen minutes' walk back of the hotel, and one mile west is a favorite spot for salmon spearing, it being an interesting sight to witness the Indians engaged in this occupation, and even more interesting for the tourist to participate in it himself, as he is, in the season, easily enabled to do. At Scuzzie, four and one-half miles west, and Salmon River, four miles east, there is capital trout fishing, and a trip to Hope by rail, for a day's fishing, is a popular outing.

Hotel Vancouver.

At Vancouver, at a short distance from the harbor, and commanding a series of views of the bay and the surrounding country, is the Canadian Pacific Company's Hotel Vancouver, the principal hotel of the city, and one unsurpassed in its appointments and general comfort by any on the Pacific Coast. It is at all times well patronized, summer and winter, but on the arrival and departure of the Japan and China or Australian steamers, is more than usually bright and busy. Almost adjoining it is the Opera House, one of the most charming theatres outside of New York, and this, with other attractions, has served to make the hotel so popular that it was found absolutely necessary to increase the size of the building. This series of hotels, with the Chateau Frontenac, on the famed Dufferin Terrace at Quebec, and the new Viger Place Hotel and tourist at Montreal, two of the finest hotels in America, enables the tourist to cross from the Atlantic to the Pacific through Canada, and to spend whatever leisure time he chooses in fishing, shooting or wandering amidst the magnificent scenery of the Rocky Mountains, with all the comfort that capital and enterprise have provided for the tourist by this route. The rates at the Vancouver are from \$3.00 to \$4.50 per day, with special terms for a week or longer, on application to the manager.

Further information as to accommodation, rates, etc., can be secured by writing the managers of the different hotels, or J. A. Sheffield, Superintendent and Manager of the Company's hotels, Montreal.

The Route.

Banff, Field, the Great Glacier, and the other resorts in the mountains, and the Pacific Coast, are reached from New York, Boston, and

THE GLACIER HOUSE, GLACIER.

other Atlantic points by way of Montreal, and thence by the Canadian Pacific Railway, or by Niagara Falls, Hamilton and Toronto, and thence to North Bay on Lake Nipissing, where connection is made with transcontinental trains, an alternate route being offered during the season of navigation by the company's magnificent steamships through Lakes Huron and Superior from Owen Sound, on Georgian Bay, and connecting with the Canadian Pacific at Fort William, at the head of Lake Superior. From the middle-western states the route is by the Soo-Pacific Railway, from St. Paul and Minneapolis, connecting with the Canadian Pacific trains at Moose Jaw, in the Canadian Northwest.

For further particulars or information, apply to any agent of the Canadian Pacific Railway, or to
