FORT BEAUSÉJOUR NATIONAL PARK
NEW BRUNSWICK

Introduction

The site of old Fort Beauséjour, located on the long ridge between the Aulac and Missaguash rivers, and overlooking Chignecto Bay, forms one of the most interesting historical places in New Brunswick. The fort was originally constructed by the French between 1751 and 1755 on the orders of de la Jonquière, Governor of Canada, as a counter defence against the English Fort Lawrence, which stood on a parallel ridge about a mile and half to the southeast. It derived its name from an early settler, Laurent Chatillon, surnamed Beauséjour, after whom the southern end of the ridge had been named Pointe-à-Beauséjour.

In 1755, before its actual completion, Fort Beauséjour was attacked by an expedition from Boston under the command of Colonel the Honourable Robert Monckton. Landing at the mouth of the Missaguash river, the English force, which numbered about 2,000 New Englanders, encamped at Fort Lawrence before marching on the fort, being joined there by 300 British regulars. Following the capture of an outpost at Pont à Buot, heavy guns and mortars were landed from the boats, gun-emplacements were dug over 800 yards north of the fort, and a heavy fire was opened on the fortifications by the batteries. The garrison worked feverishly in strengthening their defences. Assistance expected from Louisburg failed to arrive, and after an English prisoner named Hay had been killed by an exploding shell in what was considered a bomb-proof casemate, the garrison under de Vergor surrendered.

Following its capture, the fort was occupied by English troops, and re-named Fort Cumberland by its captor, Monckton. The defences of the fort were greatly strengthened, including the construction of an outer earthworks and a stone powder magazine. During the American Revolution of 1776 the fort withstood an attack by a force under Colonel Jonathan
Eddy, which was repulsed by the garrison in command of Colonel Joseph Goreham. Repairs were made to the fort during the war of 1812-14, but later the garrison was withdrawn and the place allowed to fall into ruins.

In 1926 an area of 59 acres, containing what remained of the fort, was set aside as a National Historic park, and the original name, Fort Beauséjour, was adopted for the park. Since that time, work has been carried on for the purpose of checking the destructive processes caused by long years of neglect, and of making the entire area more accessible to visitors. Historic points of interest have been marked, footpaths constructed, drinking water provided, and a rest pavilion and other facilities made available for visitors.

The original pentagonal earthworks are still in a remarkable state of preservation, and one of the former casemates or bomb-proof shelters has been partially restored. About 400 yards north of the fort is a remarkable system of entrenchments. Until recently this system has been described as “Monckton’s Lines”, believed to have been used by the British in their attack on the fort in 1755. This recently has been proved to be an error, as a result of the discovery of the plans of the engineer Brewse in Windsor Castle library. These plans show that Monckton’s Lines were situated at a considerable distance to the northeast of these works, and were much smaller and simpler. It is, therefore, certain that the elaborate trench system just described was developed by the British as an advanced line of defence for Fort Cumberland.

In 1935 the Dominion Government erected a museum near the entrance to the fort. The official opening took place with appropriate ceremony on August 1, 1936, in the presence of several thousand people. At that time an interesting collection of exhibits was on view, relating chiefly to the civil and military history of Chignecto and the neighbouring counties of Westmorland and Albert in New Brunswick and Cumberland in Nova Scotia. The exhibits were generously contributed by residents of these districts. There has been a large number of donations and loans to the museum since it was opened, and consequently this catalogue is much larger than that issued for the opening ceremony.

The church bell was saved and preserved. It remained in the district undamaged for many years, and, finally, when Mount Whatley Church was built, the old bell was acquired for use in it. Sir Charles is the son of Canon Roberts who was Rector of the Church of St. Ann’s, Westcock, 1860-1874. He has had a distinguished career as a writer of prose and poetry. Some of his most charming verses have been inspired by the Tantramar country, while he has written several historical novels in which Fort Beauséjour figures. The following selections of verse, in his own writing, have been donated to the Museum by special request:

261. Stanzas from “Ave! an Ode for the Shelley Centenary”; and from “Canadian Streams”.

I. MAPS, PLANS AND SKETCHES

341. Early French map of Acadia. Undated, but certainly made after Forts Beauséjour and Gaspereau were commenced (in 1751), the year after the building of Fort Lawrence. As the road between Beauséjour, Baie Verte and Gaspereau is marked, the map belongs to the period 1752-4. The original is in Paris; this one was copied from a replica of the latter in the Public Archives, Ottawa.

342. French map of Acadie—peninsular portion. Undated, but made between 1703-1749, i.e., after the Treaty of Utrecht and the founding of Halifax. Copied from the original in the British Museum.

343. Route between Forts Beauséjour and Gaspereau, 1751. Franquet.

346. Earliest plan of Fort Beauséjour, 1751.

347. Franquet’s plan of Fort Beauséjour, 1751.

348. Plan of Fort Beauséjour, 1752, showing profile sections through a bastion and curtain.

349. Barracks of Fort Beauséjour (Corps de Caserne), 1752.

357. Fort Cumberland, first projected changes in autumn of 1755. Brewse.
358. Plan of Fort Cumberland, showing changes made in the French Fort and the additions proposed. This plan was executed, probably in 1757. Though it is unsigned, Brewse was, with little doubt, the engineer. It is interesting to compare this plan with that of Morse, made in 1784. With few changes the early plan was adopted. The original is in the Loudon Collection in the Henry E. Huntington Library and Art Gallery, California, to whose courtesy Dr. Webster was indebted for the copy.
359. Fort Cumberland. Completed form; plan of Colonel Robert Morse, R.E., 1784.
361. Fort Cumberland, 1870. Powder magazine, much destroyed, still standing, with roof. Inside fort is old house built in 19th century and used as a brewery at one time.
365. Fort Beauséjour National Park, showing line of former trenches since obliterated by cultivation. Royal Canadian Air Force. Aerial photograph, coloured, 1929.
369. Forts Beauséjour and Lawrence, showing expilot of the boy, Brook Watson. Though having only one leg he swam the Missaguash river in April, 1755, amidst floating ice, and made the cattle, belonging to Fort Lawrence, which had crossed to the French side, return again to the British side by swimming the river. A French officer is seen on horseback, having ridden down from Fort Beauséjour. He was so impressed by the boy's bravery that he did not interfere in any way, but allowed him to return to his own side. The original painting from which this sketch was made is in the Webster collection in the New Brunswick Museum. The picture was painted from a drawing made at the time, and from it the painting was afterwards made in London, when Brook Watson started his career there. It remained in his family until the last owner was killed in the Great War.
370. Fort Cumberland in 1803. Gray. Copy of original sketch in King's University Library, Halifax.
371. Aerial Mosaic Map of the Isthmus of Chignecto. Scale about 4 inches to 1 mile. The many photographs, from which this was made, were taken by the Royal Canadian Air Force at an elevation of 10,000 feet. Coloured by Dr. Webster.
372. Sketch of cornerstone of the French church of Beaubassin, built in 1723, burned in 1750. Photo-drawing of its crude inscription. This is one of the most important relics of Chignecto. It is owned by St. Joseph's University and has been loaned to the Museum.
373. Sketch of inscription on bell of the church built by the Abbé Le Loutre at Beauséjour, just before the capitulation in 1755. The church has disappeared, though its site is marked. Many years ago, the bell was acquired by Mount Whatley Anglican Church and placed in the belfry, having functioned ever since. The church authorities have generously given the old bell to the Museum. This sketch is a copy of the inscription and decoration on the bell, made years ago by Dr. W. F. Ganong.
374. Fort Edward, Piziquid (now Windsor), Nova Scotia. In March, 1750, a fort was built on an elevation at Piziquid, known now as Windsor, Nova Scotia. It was an important post held by the British and used by them to curb the French settlers who were numerous in that part of the country. Copy of original watercolour by Captain John Hamilton, 40th Regiment, made in 1755. The original is in the Public Archives. At the present day only a small blockhouse remains.
375. One of the earliest plans of Halifax, Nova Scotia. The original sketch was made in 1750, and was first published as an inset in a map, issued by T. Jefferys, 1752. This is copied from a map in the Public Archives.
376. Annapolis Royal, about 1750. One of several sketches made by Capt. John Hamilton, 40th Regt., while serving in Nova Scotia. Copy of the original in the Public Archives.

**Chignecto Dry Dock**

In the transactions of the Royal Society, 1933, is a paper by Dr. J. C. Webster, describing a remarkable artificial formation on the La Coupe river, a branch of the Aulac, which opens into Cumberland Basin near the mouth of the Tantramar. Just opposite the southern end of Jolicure ridge there is a curious
arrangement of massive walls of earth forming an irregular quadrilateral elevation straddling the La Coupe river. A thorough study of this formation makes clear that it was originally a dock with gates, meant for the repair, construction and storage of vessels and boats in the early French days. They could be floated up from the Bay of Fundy on a rising tide, which at the dock must have been at least 20 feet in height (38 to 45 at Cumberland Basin). The statements of the oldest inhabitants indicate that, up to the first part of the 19th century, massive timbers held up the high banks of earth at the site of the dock-gates. These have since rotted away and considerable earth has fallen down into the bed of the river, which is now merely a stream, owing to the reclamations of the marshes by aboiteaux in lower parts of the Aulac river. A survey has been made by competent engineers of the National Parks of Canada, and several aerial photographs have been taken by the Royal Canadian Air Force, the results of which are shown in the following photo-drawings:

378. View of dry dock and environs from an elevation of 10,000 feet.

A detachment accompanied Major Lawrence to Chignecto when he built Fort Lawrence. In 1755, when Monckton called at Annapolis Royal on his way from Boston with a force destined to attack Fort Beauséjour, he called at Annapolis and was joined by a detachment of the 40th. During the siege one of its officers, Ensign Hay, was killed in a casemate of the fort, in which he was a prisoner, his death being due to the blowing in of the roof by a British shell. Previous to 1750, the Colonel-in-chief was Richard Phillips who was succeeded by Hon. Edward Cornwallis.

He then became Lieutenant-Colonel; Lieutenant Governor of Nova Scotia, 1754; Governor, 1756. On the obverse side is the British Coat-of-Arms and the inscription "Gcorgis Tertius. Dei Gratia Britaniarem Rex Fidei Defensor". On the death of a sovereign, a new seal was made with the Royal name changed, and, possibly, some minor changes.
