Waterton-Glacier

A Guide to Waterton-Glacier International Peace Park

In Search of “Quiet”

Hike away from the road and listen closely; it’s not quiet here at all.

Wind rustles the branches of the aspen, and the delicate sound of one leaf striking another, multiplied by thousands, fills the air. A drop of water slowly melts out of last winter’s snows and trickles down, joining countless other droplets. Their combined flow tumbles and boils over the red and green rocks of the streambed to form the constant background gurgle of the creek. A ground squirrel’s high pitched chirp announces your presence. Somewhere in the distance a woodpecker drums on a dead snag in search of insects. All the while, the forest creaks and groans as the trees way in the breeze. This place is filled with sound, natural sounds, primal sounds, sounds many of us have forgotten.

Just over the ridge, a short distance away, is one of the busiest places in the park and yet here you are, alone with the music of the park. It’s like that in a lot of places here. Waterton-Glacier preserves well over a million acres and nearly 800 miles of trails penetrate its remote secrets. Of the more than two million people a year that visit the park, the vast majority never stray much further than the roads. There are vast sections of the park that few people ever see.

As our lives become more and more complicated by the hustle and bustle of everyday life, national parks can serve as refuges of calm that replenish the spirit. That idea is not new however! Almost a century ago John Muir observed: “...thousands of tired, nerve-shaken, over-civilized people are beginning to find out that going to the mountains is not new however! Almost a century ago John Muir observed: “...thousands of tired, nerve-shaken, over-civilized people are beginning to find out that going to the mountains is going home; that wilderness is a necessity; and that mountain parks and reservations are useful not only as fountains of timber and irrigating rivers, but as fountains of life.”

Increasingly, one of the benefits of places like Waterton-Glacier International Peace Park is the opportunity to leave the mechanized, modern world behind, temporarily, and retreat back to a more natural time. Yet every day there are fewer places where one can escape the sound of planes and trains and cars.

While you are here, take the time to venture “into” the park. Leave your car behind. A short walk can treat you to the gentle rhythms of a stream. On a hike through the forest you will no doubt be greeted to the ratchet-like call of a red squirrel. An overnight trip can lead you to a high mountaintop where the winds howl. It’s not quiet here at all.

What is an International Peace Park?

In 1932, largely through the work of the Alberta and Montana chapters of Rotary International, the Canadian Parliament and the United States Congress designated Waterton Lakes and Glacier National Parks as Waterton-Glacier International Peace Park, the first of its kind in the world.

This is a land of high mountains and deep valleys, of alpine meadows, dense forests and prairie grasslands; a combination that provides habitats for a spectacular array of plants and animals, unrestricted by the political boundary of the international border.

An international elk herd summers in Glacier National Park and migrates downslope to winter on the prairies of Waterton. For years Glacier had no wolves until a few animals from Canada travelled south and established a pack. An eagle chick hatched in Glacier in 1991 and fitted with radio telemetry was tracked to Calgary. The wind and water disperse seeds from one country to another.

The International Peace Park is not a mere symbol, but a real example of what conservation and cooperation can achieve.

Special Peace Park Activities

International Peace Park Hike

Hike from Canada to the U. S. and cruise back on the waters of the deepest lake in the Canadian Rockies. The International Peace Park hike is a free guided trip held Saturdays from June 28 to August 30. Participants meet at the Bertha Trailhead in Waterton Lakes National Park at 10 a.m. Bring a lunch, water, raingear, jacket, hat and wear good footwear for walking. Dogs are not permitted. The trail is not difficult, but you will be hiking most of the day (14 km/8.5 mi). We’ll be back to Waterton Park about 6 p.m. Hikers need to purchase a one-way boat cruise ticket for the return trip.

Adults - $10.00; Youth 13 to 17 - $7.00; Children 4 to 12 - $5.00 (Canadian)

Annual Peace Park Assembly

Since 1932, Rotary’s Waterton-Glacier International Peace Park Association has held annual assemblies to honor the creation of the Peace Park.

This year’s assembly, the 66th, is hosted by the Rotary Club of Calgary, Alberta, and takes place at the Prince of Wales Hotel in Waterton from September 12 through 14.

Getting Around on the Going-to-the-Sun Road

Are you driving an RV, oversized vehicle or pulling a trailer? Vehicle size restrictions may limit your use of sections of the Going-to-the-Sun Road. See page 19 for information on vehicle size restrictions.

Several alternative transportation options are available to help visitors enjoy the Going-to-the-Sun Road. Take advantage of a narrated guided tour or, for point-to-point transportation, hop on the park’s shuttle. See page 11 for more information.

Biking, Hiking, and Camping

Glacier International Peace Park
Brochures and signs guide visitors on Glacier's five self-guided trails. The Trail of the Cedars, Huckleberry Mountain, Hidden Lake, Sun Point, and Swiftcurrent Nature Trails encourage hikers to experience Glacier National Park at their own pace. The Trail of the Cedars is wheelchair accessible.

For those who wish to learn a little more about the park, visit the numbered sites on the map. The Trail of the Cedars is wheelchair accessible.

hikers planning to camp overnight in Glacier's backcountry must stop at a visitor center or ranger station to obtain a backcountry permit. Visitors entering Glacier from the north may also get a backcountry permit at the Waterton Visitor Reception Centre. Free permits are issued on a "first-come, first-served" basis no more than 24 hours in advance of your trip. It is also possible to reserve a trip in advance, in person or by mail. Write to: Backcountry Permits, Glacier National Park, West Glacier, MT 59936 for information on how to reserve a permit by mail. There is a $20.00 reservation charge.

Gather firewood along the Going-to-the-Sun Road and from the Many Glacier Hotel to trailheads at Sheyeh Bend, Logan Pass and the Loop. Hikers should inquire at the hotel desk.

Collecting firewood is permitted along roads or near developed campgrounds is prohibited. Dead and down wood are depleted, continued collecting promotes unsightly social trail development and vegetation damage.

Fires are permitted only in designated campgrounds and picnic areas where grates are provided. Collecting firewood is permitted along roads or near developed campgrounds is prohibited. Dead and down wood are depleted, continued collecting promotes unsightly social trail development and vegetation damage.

Fires are permitted only in designated campgrounds and picnic areas where grates are provided. Gathering firewood from along roads or near developed campgrounds is prohibited. Dead and down wood are depleted, continued collecting promotes unsightly social trail development and vegetation damage.

Sun Tours: A Blackfeet Perspective

East Glacier serves as a gateway to both Glacier National Park and the Blackfeet Nation. Operating out of this small community, Ed DesRosier's Sun Tours offers a unique perspective into both worlds.

These interpretive sun tours, traveling east to west, are conducted by Blackfeet guides who share their cultural history relating to the park's natural features. While crossing the Continental Divide via the Going-to-the-Sun Road, stops are made at various dramatic vistas. Here is a chance to immerse yourself in the Native American culture of the Blackfeet.

Lunch is on your own in the Lake McDonald Lodge area and the return trip will drop you off where you began your tour.

Tours depart East Glacier at 8 a.m. daily and return by dinner. Guests can also be picked up in the St. Mary area and at Rising Sun, within the park.

Prices, not including lunch or entrance fees, are: $15.00 for adults, $15.00 for children 5 to 12, with children under 5 free. Sun Tours operates between the opening of the Going-to-the-Sun Road (anticipated in mid-June) until September 30.

For reservations and additional information call 406-226-9220 or 1-800-SUN-9220.

Why Fees?

Glacier National Park, like other national park areas, has a mandate to provide for the use and enjoyment of the park and to preserve this area for future generations. This dual objective—use and preservation—comes at a price: Protecting our natural and cultural heritage while ensuring that everyone visiting these areas has a safe and enjoyable experience costs money.

Government funding available for necessities like road and building repairs, campground maintenance, visitor protection and other services has not kept pace with demand. In 1996, Congress directed the U.S. Department of the Interior to implement the Recreation Fee Demonstration Program to address these needs.

Managing our public lands is a major financial investment. While most of that investment comes from the general tax base, recreational users of these areas derive a greater benefit from, and place a greater burden on, resources than the public at large. These new fees redistribute that burden so that users pay an increased share of the costs.

The Fee Demonstration Program will:

- Allow a significant portion of the fees collected at a public area to be spent directly on behalf of that area.
- Allow each agency to collect fees efficiently and to determine the activities to be covered. In some cases, visitors will have to pay for activities that have never had an associated fee.
- Continue for three years, at which point the program will be evaluated to determine future fee collection policy.
- Allow each agency to develop fair and equitable fee collection programs, whether for areas that are large or small, urban or wilderness, natural or historical.

Mountain Weather

Glacier's summer weather is as varied as its landscape. In the valleys, daytime temperatures can exceed 90°F. Upslope, in areas like Logan Pass, it is frequently 10 to 15 degrees cooler. Strong winds predominate on the east side. Overnight lows throughout the park can drop to near 20°F, and snow can fall anytime. In August of 1992, a foot of snow fell on the northeastern corner of Glacier. Prepare for a variety of weather conditions and pack accordingly. You may start the day in a T-shirt and shorts and need a warm jacket by evening. Summer rainfall averages around two to three inches per month.

Crime in the Parks

National parks have experienced an increase in crime in recent years. Car burglaries and theft of personal property are uncommon. When you leave your vehicle or campsite, secure all valuables out of plain view. If you observe suspicious activity, contact a ranger as soon as possible. Descriptions of individuals, vehicles, or license numbers are extremely helpful.

Be Aware That

- Feeding or disturbing wildlife is against park regulations.
- Removal of any natural or cultural feature like flowers, rocks, artifacts, or antlers is prohibited.
- Loaded firearms are not allowed in Glacier. Unloaded firearms may be transported in a vehicle if the weapon is cased, broken down or rendered inoperable, and kept out of sight.
- Open containers of alcohol in a motor vehicle are prohibited.

Regulations are designed to protect park resources and preserve the quality of your visit. Park rangers strictly enforce park regulations.

Planning the Future

In 1995 Glacier began a comprehensive planning effort to provide a framework for making decisions about future resource protection and visitor experience strategies. Park staff have been working with Indian tribes, local communities, the State of Montana, other agencies, special interest groups, park visitors and the public to develop a new general management plan (GMP).

Glacier National Park staff encourage you to get involved. Get on our mailing list, read future newsletters, attend upcoming meetings, or write a letter to let us know your thoughts. Copies of planning newsletters and announcements of upcoming public meetings are available at Glacier National Park headquarters, visitor centers, and ranger stations. To get on our mailing list or to provide comments, write to:

GMP Team

http://www.nps.gov/glac
What's New in Town?  

You have likely already noticed some changes in town this year! Construction is underway on Waterton's newest development, the Waterton Park Lodge, being built by Roman Investments of Edmonton. The resort complex should be completed by mid June 1998, but some parts may be in operation earlier. "We're pleased with the development," says Park Superintendent Ian Syme. "Roman Investments is very conscious of the environmental and educational components of locating a facility in a national park, and plans to operate the complex as an eco-lodge. We're confident that their operations will mirror national park values." Plans for the development, which will be built on the old Waterton pool site, call for visitor accommodations, staff housing, a small youth hostel, an outdoor education centre, meeting rooms, and a recreation facility and pool. The $7 million development will be open year round, and includes many energy-saving and environmentally-friendly features. Syme notes, "The complex meets the Waterton Development Framework guidelines for density, landscaping, and architecture."

New Fire Brochures!  

Fire is an essential part of nature. Eliminating it from ecosystems is like trying to shut out the wind or rain. For much of the last 100 years, park managers have viewed fire as a destructive force, and worked to extinguish it. Now they are seeking ways to reframe fire and the landscape. How do we reconcile this new view of fire while protecting life and property? Parks Canada has developed several fact sheets and a brochure to provide you with some background.

Ask for a copy at the Visitor Reception Centre

Unseen but not Forgotten  

Parks Canada is moving away from consumption focused fishing toward encouraging fishing as part of an overall park experience, which includes conservative angling practices and catch levels. New regulation changes in support of this include:

- daily possession limits on all native fish species in the park - Mountain Whitefish, Lake Whitefish and Northern Pike - lowered from 5 to 2 fish;
- the catch and possession limit for bull trout to remain at zero;
- the aggregate daily catch and possession limit lowered from 3 to 2 fish;
- a ban on the use of all types of lead weights less than 50 grams in size (ie. about 1 3/4 ounces). Park managers are committed to conserving native species. Former angling regulations allowed greater harvest of native fish than they did for non-native introduced fish. The regulation change corrects that inequity, recognizing the importance of native fish to park and regional ecosystems. A moderate catch will be allowed for recreational anglers, while discouraging levels inconsistent with a national park fishing experience.

The restriction on use of lead weights will eventually remove this hazard from park waters, where it can cause a serious lead poisoning problem for waterfowl. There are a number of different materials being used to produce non-lead sinkers and weights (tin, stainless steel, tungsten). They are similar in performance to conventional lead-based variables, and will be stocked in local angler supply stores. The restriction applies to all waters including the Glacier National Park end of Upper Waterton Lake.

Why are lead fishing weights a problem? When feeding, waterbirds ingest smaller sinkers that were lost or discarded. Sinkers may look like food items, small stones or pieces of grit that aid in digestion. Once birds swallow the sinkers, they will suffer from lead poisoning. Their digestive tract becomes paralysed, they become weak and emaciated, less mobile, experience convulsions, go into a coma, and then die within 2-3 weeks. Ingesting even one small lead sinker can kill a waterbird. Bull trout have recently disappeared from much of their former range. The decline is the result of damaged habitat, overfishing and displacement by introduced species. A zero catch and possession limit was introduced to protect the remaining bull trout. As Alberta's designated provincial fish, the bull trout is a great ambassador for the ecologically healthy streams it needs to live.

How Many Bears?  

A frequently asked question by visitors, "How many bears live in the park?" Estimating the population of any animal is an ongoing challenge for biologists as it can be both difficult and expensive.

A common method used is to mark animals, but collars, ear tags and tattoos involve capture and physical restraint, causing stress to the animals. To avoid these problems, researchers have been developing alternatives. One method uses DNA "fingerprints" as marks. Traditionally, blood and tissue samples were used as DNA sources but other sources, less invasive to the animal, include hair and scat. Hair samples made of up to 100 bears using liquid fish fertilizer splashed on a tree trunk. Barbed wire was strung from tree to tree around the scent source, at 30-50 cm above ground. Bears left hairs on the wire when they crawled under or stepped over the wire on their approach to the scent tree. Alternately, sites are selected based upon their existing use by bears (eg. rub trees).

Waterton Lakes National Park, in a cooperative study with Alberta Environmental Protection (AEP), will be using this method this summer to learn more about bear numbers, lineages and movements in southern Alberta. AEP will manage the contract, and the park will provide logistical support and hair analy-sis for this one-time, intensive study. Preliminary results indicate "hair capture" is effective for identifying individual bears. In the future, it may be possible to estimate bear numbers and track their movements without expensive and disruptive capture and mark projects. It may also be possible to apply this less invasive method to learn more about other rare or difficult to study species such as wolverine and lynx.
Water Hazards
Swift, cold glacial streams and rivers, moss-covered rocks, and slippery logs all present dangers. Children, avid photographers, boaters, rafters, swimmers, and fishermen have fallen victim to these rapid, frigid streams and deep glacial lakes. Use extreme caution near water. Avoid wading in or fording swift-flowing streams, and never walk, play, or climb on slippery rocks and logs, especially around waterfalls. When boating, don't stand up or lean over the side, and always wear a lifejacket.

Giardiassias can be caused by a parasite (Giardia lamblia) found in park lakes and streams. Persistent, severe diarrhea, abdominal cramps, and nausea are the main symptoms of this disease. If you experience any symptoms, contact a physician. When hiking, carry water from one of the park's treated water systems. If you plan to camp in the backcountry, follow recommendations received with your permit. The easiest effective water treatments are either to bring water to a boil or to use an approved filter.

Giardiasis can be caused by a parasite (Giardia lamblia) found in park lakes and streams. Persistent, severe diarrhea, abdominal cramps, and nausea are the main symptoms of this disease. If you experience any symptoms, contact a physician. When hiking, carry water from one of the park's treated water systems. If you plan to camp in the backcountry, follow recommendations received with your permit. The easiest effective water treatments are either to bring water to a boil or to use an approved filter.

Hypothermia
Hypothermia, the "progressive physical collapse and reduced mental capacity resulting from the chilling of the inner core of the human body," can occur even at temperatures above freezing. Temperatures can drop rapidly. Sudden mountain storms can change a warm and pleasant hike into a drenching, bitterly cold and life-threatening experience. People in poor physical shape or who are exhausted are particularly at risk.
Prevention
- Prevent hypothermia by using water resistant clothing before you become wet.
- Wear clothing that wicks moisture away.
- Minimize wind exposure and if your clothes become wet, replace them.
- Avoid sweating by dressing in layers, rather than in a single bulky garment.
- Pack a sweater, warm hat, and reigear for any hike.

Warning Signs
- Uncontrolled shivering, slow or slurred speech, memory lapses and incoherence.
- Lack of coordination such as immobile or fumbling hands, stumbling, a lurching gait, drowsiness, and exhaustion.

Immediate Treatment
- Seek shelter from weather and get the victim into dry clothes.
- Give warm non-alcoholic drinks.
- Build a fire and keep victim awake.
- Strip victim and yourself, and get into sleeping bag making skin-to-skin contact.
- If victim is semi-conscious or worse, get professional help immediately.

Drowning
Sudden immersion in cold water (below 80°F, 27°C) may trigger the "mammalian diving reflex." This reflex restricts blood from outlying areas of the body and routes it to vital organs like the heart, lungs, and brain. The colder the water, the younger the victim, and the quicker the rescue, the better the chance for survival. Some cold-water drowning victims have survived with no brain damage after being submerged for over 30 minutes.

Revival Procedure:
- Retrieve victim from water without endangering yourself.
- Prevent further body heat loss, but do not rewarm.
- Near drowning victims may look dead. Don't let this stop you from trying to revive them!
- If there is no pulse, start CPR regardless of the duration of submersion.
- Delayed symptoms may occur within 24 hours. Victims must be evaluated by a physician.

Ticks
Ticks are most active in spring and early summer. Most bites don't result in illness, but several serious diseases, like Rocky Mountain Spotted Fever, can be transmitted. Many accidents occur when people fall after stepping off trails or roadsides, or by venturing onto very steep slopes. Stay on designated trails and don't go beyond protective fencing or guard rails. Supervise children ed trails and don't go beyond protective fencing or guard rails. Supervise children.

Watch Your Step
Mountainous Terrain
Many accidents occur when people fall after stepping off trails or roadsides, or by venturing onto very steep slopes. Stay on designated trails and don't go beyond protective fencing or guard rails. Supervise children closely in such areas. At upper elevations, trails should be followed carefully, noting directions given by trail signs and markers.

Snow and Ice
Snowfields and glaciers present serious hazards. Snowbridges may conceal deep crevasses under snowfields, and collapse under the weight of an unsuspecting hiker. Don't slide on snowbanks. People often lose control and slide into rocks or trees. Exercise caution around any snowfield in the parks.

Photographing Wildlife
Whether bears, mountain lions, deer, squirrels, marmots, or any other species, all animals can present a very real and painful threat, especially females with young. Enjoy wildlife with a telephoto lens (400mm or longer). You know you are too close if the animal detects your presence and moves, or if it appears disturbed. A photographer was killed here in 1987 after approaching grizzly bears.

Commercial Photography
Special regulations govern commercial photography and filming. In Glacier a commercial photography permit is required if photography:
- Is for advertising a product or service;
- Uses models, sets or props;
- Creates a potential disruption to visitors;
- May damage park resources.

In Glacier National Park, obtain permits and further information on commercial photography by calling 406-888-7800.
In Waterton Lakes National Park, commercial photographers need to contact the Superintendent's Office for information.

Medical Services
If you are injured or suddenly become ill while visiting the parks, please contact a warden or ranger for information and assistance. To ensure adequate staffing on your arrival at a hospital, call before setting out.

Wolves
You may see a wolf during your stay in Waterton-Glacier International Peace Park, but identification is tricky. Wolves are usually gray, but can be white or black. Coyotes, which are much more frequently seen, look very similar and are often mistaken for wolves, but wolves are much larger. While coyotes weigh about 25 lbs (11 kg) and are up to 2 ft (.6 m) tall, adult wolves may weigh 90 lbs (41 kg) or more and stand up to 3 ft (1 m) in height. Wolves have a larger muzzle and shorter, rounder ears than coyotes. Their long legs and deep narrow chest make for efficient long distance travel. Wolves have been known to travel up to 20 (32 km) or more miles per day.

Mountain Goats
Visitors to Glacier are more likely to see mountain goats than bighorn sheep, especially in the Logan Pass area. In early summer, the Goat Lick on Highway 2 offers good views of these shaggy beasts. In Waterton, goats are occasionally seen in the Goat and Rowe Lakes areas.

Bighorn Sheep
Dramatic head-crashing clashes between rams highlight the mating season in November and early December. Visitors to Waterton are more likely to see sheep than mountain goats. Good places to look are the townsite or the Red Rock Canyon area. In Glacier, scan the slopes in the Many Glacier Valley. Ewes and lambs group together so they are usually easier to spot. Although often confused with mountain goats, bighorns have tan coats and beige horns. Since the horns are never shed, bighorns can be aged by their horn size. Only mature rams have the huge, curving horns that give the species its name. Bighorns prefer grass and are often found on moderately sloped meadows near cliffs. Excellent climbing skills help them to evade predators.

Keep the “Wild” in Wildlife
Waterton-Glacier International Peace Park is a place like few remaining in the world. Natural forces such as fires, floods, and avalanches continue to create many diverse habitats, providing niches for a spectacular array of wildlife. Park visitors enjoy wild animals in their natural environment. As a visitor to their home, learn and respect the ways of wildlife.

One of the greatest needs of animals in the wild is undisturbed space. Although some may spend part of their year close to roadways and developed areas where they are easy to observe, enjoy them at a distance. While wild animals may appear to tolerate humans, approaching at close range can cause them stress. They may be disturbed from their rest, forced away from natural feeding areas, or have travel routes blocked by unaware or thoughtless humans. A human presence can keep birds away from their nests long enough for eggs or young to become fatally chilled. Birds can lose their eggs or young to predators attracted to a nest by human scent.

Especially in winter and early spring, animals often experience low energy reserves. To avoid the approach of humans, animals may expend precious energy, leaving them in a weakened state or forced out of shelter.

When enticed into close contact with humans, animals can easily become habituated to people. They lose their special wild and free quality, yet retain their dangerous ability to wound. Animals catch on quickly and begin unacceptable and dangerous behavior. Each year people are injured by the antlers, horns, teeth, hooves, and claws of wild animals.

If you entice or feed an animal, you may share responsibility for its death! Animals may be hit by cars after becoming accustomed to obtaining food near roads. Every cookie tossed out is another step in the habituation process. Habituated animals often have to be removed or killed.

How can you help?
Educate yourself. Check out special exhibits and roadside signs which explain the problem. Ask park staff: then act! Stop approaching, enticing or feeding wildlife in the park. Let others know about the problem. It is the loss of that animal you just photographed worth the picture? Think again and remember that laws regarding feeding wildlife are strictly enforced.

All wildlife can be dangerous! Be observant! Watch animals for signs of increased alertness or fear.

If you cause a change in an animal’s behavior, you are too close.
Animals catch on quickly and begin unacceptable and dangerous behavior.

When you entice or feed an animal, you may share responsibility for its death! Habitu­ated animals often have to be removed or killed.

Why are Those Beautiful Trees Dying?
High-elevation forest research in the Waterton-Glacier Ecosystem
by Katherine C. Kendall, Kevin VanThigem, and David Schirokauer

You hike up a series of steep switch-backs for what seems like hours. The trees are thin­ning out and getting smaller as you gain elevation. The views at the valley below and the mountain beyond are breath-taking. The top of the ridge is in sight. While taking a well-earned break, you notice a group of picturesque trees. They have spreading crowns and some trunks are gnarled and twisted, probably due to perpetual strong winds. Many of them are dead and look like ghost trees. A few still have needles on the lower branches but the tops are barren. You stroll over to a tree that has some greenery left on it and notice that the needles occur in groups of five, unlike the other evergreens. These are whitebark pine, or its close cousin, limber pine.

For the past two years, Katherine C. Kendall, a research ecologist with the Biological Resources Division of the U.S. Geological Survey, has led a research project on 5-needled pines in the Waterton-Glacier and Greater Yellowstone ecosystems. Her study found that 43% of Glacier’s and Waterton Lakes’ whitebark pine trees are dead. Of the remaining live trees, 70% of the whitebark pines and 66% of the limber pines, are lethally infected with an alien fungal disease known as blister rust. White pine blister rust, which is native to Europe, was introduced to North America accidentally at the turn of the century in a shipment of seedlings destined for a commercial tree farm. The consequences for North America’s 5-needled pines have been severe.

Mountain Lions
Mountain lions are big, beautiful, wild cats, known by many names including cougar, puma and panther. Adult mountain lions weigh between 90 and 150 lbs (41 to 68 kg) and are about six to eight ft. (2 to 2.5 m) in length. A long tail, one third the body length, is a distinguishing characteristic.

Sightings of these large predators have increased in recent years. A glimpse of one of these magnificent cats would be a vacation highlight, but you need to take precautions to protect you and your children from an accidental encounter. Don’t hike alone. Make noise to avoid surprising a lion and keep children close to you at all times. If you do encounter a lion, do not run. Talk calmly, avert your gaze, stand tall, and back away. Unlike with bears, if an attack seems imminent, act aggressively. Do not crouch and do not turn away. Lions may be scared away by being struck with rocks or sticks, or by being kicked or hit. Lions are primarily nocturnal, but they have attacked in broad daylight.

Mountain lion

Protecting Harlequin Ducks

Harlequin Ducks

Waterfall-Glacier’s rumbling streams are home to one of the rarest and most beautiful birds in North-America, the Harlequin Duck. About 40 Harlequin pairs return each spring to several park streams to breed and raise their chicks. During winter, Harlequins live along rocky points on the Pacific coast between Oregon and British Columbia. Har­lequins mate for life, and females born here will return when they are old enough to raise

Harlequin Duck male

families of their own. Harlequins tend to be shy and secretive while breeding and rais­ing their young, and they are often unintentionally disturbed by park visitors.

To help reduce disturbance to nesting Harlequin Ducks, a seasonal boating restrict­ion has been placed on a section of upper McDonald Creek, in Glacier National Park. All boating, including kayaks, float tubes, inner tubes, rafts, and canoes, are prohib­ited on upper McDonald Creek, between Mineral Creek and Lake McDonald. From April 1 through Sept. 30, Harlequin Ducks are sensitive to human disturbance, and are disappearing from much of their historic range. If you see a Harlequin, please do not approach or disturb these rare and sensitive birds. In Waterton, they may be seen from the Waterton River bridge near the park en­trance or along Rowan Creek.

Poaching and Parks

Poaching (illegal hunting or collecting in and around national parks) is at an all time high. Animals used to people, or to the scent of people nearby, are more vulnerable to the ap­proach of poachers. Trophy heads, bear gall bladders, claws or pelts, eagle talons and feath­ers, and even rare plants are targets.

In Glacier, if you observe suspicious be­havior, contact a ranger or call 406-888-7800. In Waterton call 403-859-2636. Do not approach others engaged in criminal ac­tivity. Descriptions of individuals or vehicles, including license numbers, and identification numbers of any aircraft are helpful.
Bears

Waterton-Glacier is Bear Country!

Part of the park's appeal is the presence of rare species such as the grizzly bear. Because of the grizzly's low rate of reproduction and small numbers, the ecosystem cannot afford to lose even one animal needlessly! While most visitors never see a bear, all of the park is bear country. Whether you plan to hike the trails, drive the roads, or stay overnight in a campground or lodge, take the time to learn the special precautions bear country demands.

Hiking in Bear Country

Waterton-Glacier International Peace Park provides a wonderful opportunity to view animals in their natural setting. Along with this opportunity comes a special obligation for the visitor. With just a little planning and forethought, hikers can also help ensure the survival of a protected threatened species.

Don't Surprise Bears!

Bears will usually move out of the way if they hear people approaching, so make noise. Most bells are not loud enough. Calling out or clapping hands loudly at regular intervals are better ways to make your presence known. Hiking quietly endangers you, the bear and other hikers.

When bears charge hikers, the trail may be temporarily closed for public safety. While the trail remains closed, other visitors miss the opportunity to enjoy it. A bear constantly surprised by people may become habituated to close human contact and less likely to avoid people. This sets up a dangerous situation for both visitors and bears.

Don't Make Assumptions!

You can't predict when and where bears might be encountered along a trail. People often assume they don't have to make noise while hiking on a well-used trail. Some of the most frequently used trails in the park are surrounded by excellent bear habitat. People have been charged and injured by bears fleeing from silent hikers who unwittingly surprised bears along the trail. Even if other hikers haven't seen bears along a trail section recently, don't assume there are no bears present.

While most hikers do not encounter bears, people have been seriously injured or killed by bears. Bears with cubs are especially dangerous.

Don't assume a bear's hearing is any better than your own. Some trail conditions make it hard for bears to see, hear, or smell approaching hikers. Be particularly careful by streams, against the wind, or in dense vegetation. A blind corner or a rise in the trail also requires special attention.

Keep children close by, if possible, hike in groups, and avoid hiking early in the morning, late in the day, or after dark. Inform Yourself About Bears

Park staff can help you identify signs of bear activity like tracks, torn-up logs, trampled vegetation, droppings, and overturned rocks. Bears spend a lot of time eating, so avoid hiking in obvious feeding areas like berry patches, cow parsnip thickets, or fields of glacier lilies.

Don't Approach Bears!

Never intentionally get close to a bear. Individual bears have their own personal space requirements which vary depending on their mood. Each will react differently and their behavior can't be predicted. All bears are dangerous and should be respected equally.

What kind of bear is that?

Waterton-Glacier International Peace Park is home to both black and grizzly bears. Even for experts it is often quite difficult to distinguish between the species. The following clues will help to tell the species apart:

- **Color** - Color is not a reliable indicator of species. Contrary to their name black bears also come in brown, cinnamon and blond. Grizzlies range from blond to nearly black. Grizzlies sometimes have silver tipped guard hairs that give them a "grizzled" appearance.

- **Physical features** - Grizzly bears often have a humped back and a large hump of heavy muscle above the shoulders. Their claws are around four inches (10 cm) long. A black bear's facial profile is much straighter from tip of nose to ears, without the dropped look (see photo above). Black bears lack the distinctive hump of a grizzly and have shorter claws, generally around one and a half inches (4 cm) long.

Roadside Bears

It's exciting to see bears close to roads or developments but, we must act responsibly to keep them wild and alive. Do not approach bears for pictures or entice them to come closer. Never feed bears! Besides being illegal, bears that receive human food may have to be destroyed.

If you see a bear from your car, stay inside. Leaving your vehicle endangers your safety, as well as the bear's, and exposes you to traffic hazards. If traffic is heavy, keep your eyes on the road and avoid stopping. Accept the fact that, while your passengers may get a quick look, you may not. If traffic is light, slow down and pull over when it is safe to do so. Do not stop in the middle of the road, or close to a hill or curve where other drivers may not see you in time to avoid a collision. Exercising some common sense during the excitement of sighting a bear is important to you, the bear and other visitors.

If You See a Bear?

Like people, bears may react differently to each situation. Bears may appear tolerant of people and then attack, without warning. A bear's body language can help determine its mood. In general, bears show agitation by swaying their heads, puffing, and clacking their teeth. Leered head and laid-back ears also indicate aggression. Bears sometimes stand on their hind legs or approach to get a better view, but don't necessarily interpret these as signs of aggression. It's possible the bear has still not identified you as a person if it was unable to smell or hear you from a distance.

If You Encounter a Bear, These Suggestions May Help

- Talk quietly or not at all; the time to make loud noise is before you encounter a bear.
- Back away slowly, but stop if it seems to agitate the bear.
- Assume a non-threatening posture. Turn sideways, or bend at the knees to appear smaller.
- Use peripheral vision. Bears appear to interpret direct eye contact as threatening.
- If a bear attacks, protect your chest and abdomen by falling to the ground on your stomach, or assuming a fetal position to reduce the severity of an attack. Cover the back of your neck with your hands. Your pack may also provide some protection. Do not move until you are certain the bear has left.

Camping and Bears

Odors attract bears. Our campground and developed areas can remain "unattractive" to bears if each visitor manages food and trash properly. Regulations require that all edibles (including pet food), food containers (empty or not), and cookware (clean or not) be stored in a hard-sided vehicle or food locker when not in use, day or night.

Keep a clean camp! Improperly stored or unattended food may result in confiscation of items by wildlife staff. If you see another hiker with a potential problem, report it immediately.

Place all trash in bearproof containers.

Pets, especially dogs, must be kept under physical restraint.

Report all bear sightings or encounters to the nearest ranger or warden immediately.

Pepper Spray

This aerosol pepper derivative affects a bear's respiratory system, triggering temporary incapacitating discomfort. It is a non-toxic and non-lethal means of deterring bears. Some bear sprays are pepper-like, while others work with salve plus pepper or salt. Moreover, several charts show pepper spray can be also used by pet owners as a deterrent.

Under no circumstances should pepper spray create a false sense of security or serve as a substitute for standard safety precautions in bear country.

You may not be able to cross the U.S./Canada border with pepper spray; check before attempting.
The Association also offers a series of educational programs, including seminars, workshops, and children's programs. Half-day nature programs feature fun activities which will allow children to learn about and explore the natural world of Waterton Lakes. Check the bulletin board at the Heritage Centre for weekly program details. All funds raised by the WNHA are used to support research, education, interpretation, and heritage preservation. Anyone interested in supporting the goals of the WNHA is invited to become a member. Annual fees range from $8.56 for an individual lifetime membership to $26.75 for a family lifetime membership.

The Quiet Neighbour
Visitors may not be aware of the Peace Park's neighbour, the Akamina Kishinena Provincial Park. The park is located in British Columbia on Waterton's western boundary and Glacier's northern boundary. It's main access point is through Waterton via the Akamina Pass trail. The trail, runs off the Akamina Parkway near Cameron Lake.

Thimbleberry fruit

Exploring the Area's Rich Cultural Heritage
This area holds special appeal for visitors interested in the culture of Indigenous peoples. Waterton-Glacier International Peace Park lies just west of the Blood Reserve in Canada and borders the Blackfeet Reservation in the United States. People of the Blackfeet, of the Flathead Indian Reservation, a museum of the Plains Indian culture, are located near Pablo, Montana. You can help preserve these National Historic Landmarks which help to tell the important story of the relationship of the Blackfeet and Kootenai Tribes, southwest of the park, also have a close association with the park and its resources. While visiting the park, take the time to learn about our neighbors.

• Nearby in Browning, Montana, the Museum of the Plains Indian features fascinating exhibits and Native American handicrafts as sales items. The museum is open seven days a week, from June through September. Also in Browning, NorthAmerican Indian Days, in July, is a large celebration of Native American culture that includes a parade, traditional dress, and dancing. Visitors are always welcome.

• Northeast of Waterton Lakes National Park, early Plains culture is dramatically displayed at the Head-Smashed-In Buffalo Jump, a UNESCO World Heritage Site. Summer hours are 9:00 a.m. to 8:00 p.m., seven days a week.

• The People's Center and NativeEd Ventures, for the preservation of Kootenai and Salish Culture, are located near Pablo, Montana. The Center provides educational opportunities, full day and half day interpretive tours of the Flathead Indian Reservation, a museum collection, and gift shop. Call 1-400-883-5344 for information.

Save the Chalets
Save the Chalets formed in 1992 when standard sewage and water systems at Granite and Sperly Chalets caused their closure. Repair costs exceed $4 million. Congress has appropriated $3 million, and Save the Chalets, a Montana-based, nonprofit organization, has committed to raising an additional $1.2 million from private sources. Once private funding is secured to complete water systems and composting toilet facilities, full service can be restored. This summer Granite Park Chalet will operate as a hikers shelter, and when repairs to Sperly Chalet are complete it will reopen with full service, possibly in 1998.

You can help preserve these National Historic Landmarks which help to tell the important story of the relationship of the Blackfeet and Kootenai Tribes, southwest of the park, also have a close association with the park and its resources. While visiting the park, take the time to learn about our neighbors.

**Campgrounds & Facilities**

**Townsite Campground**
- 238 sites, including 95 fully serviced; no open fires. Fees range from $13.00 to $21.00 depending on level of service.
- Open May 2 to October 15.

**Crandell Campground**
- 129 semi-serviced sites off Red Rock Parkway.
- Fee $13.00. Open May 15 to September 21.

**Belly River Campground**
- 24 unserviced sites off Chief Mountain Highway.
- Self registration. Fee $10.00. Group camp, must reserve ahead. Call 403-859-2224. $2.00/person/night. Open May 16 to Sept. 22.

**Wilderness Camping**
- $6.00/person/night, children under 16 free.
- Annual Pass $42. Must register at Visitor Reception Centre. Advance reservations available, call 403-859-5133.

**Heritage Interpretation Programs**

**Heritage Interpretation Programs**

**Fire Permits**
- $3.00/day - required at Crandell and Belly River Campgrounds.
- Gathering of firewood is prohibited in the park, except for use in specifically designated backcountry campgrounds.

**Boat Launches**
- Behind Visitor Headquarters for Upper Waterton Lake and adjacent to Linnet Lake for Middle Waterton Lake.

**Emerald Bay Marina**
- Beav tails available for rent; check at marina.

**Public Tennis Court**
- Located one block from Main Street on Cameron Falls Drive.

**International Peace Park Hike**
- Saturdays, 10 a.m. (8 hours)
- First hike offered until June 28th. Please see cover article for details.

**Hiker Shuttle Service**
- To Crypt trailhead - Rated a #1 hike in Canada. To Goat Haunt. Montana for $15.00 to Buffalo jump will be beside the Heritage Centre with an assortment of artifacts and stories. Special thanks to our sponsor, "The Trail of the Great Bear".

Shuttle, Tours & Trips

Van and Bus Tours

Sun Tours offers interpretive van tours in Glacier National Park from mid-June to September 30. Tours highlight Blackfeet culture and history relating to Glacier National Park’s natural features. Tours begin from East Glacier, St. Mary, and Rising Sun. For reservation information, call 1-800-SUN-8220 or 406-226-9220. See related article on page 3.

Lake McDonald Lodge, Glacier Park Inc., offers tours on historic red buses between park lodges as well as East Glacier, West Glacier, Waterton, and St. Mary. Schedules are available at all GPI operated locations. For reservations, call the Transportation Desk at 406-226-9311.

Going-to-the-Sun Road Shuttle Service

Shuttle service is offered daily, through September 7, between Lake McDonald Lodge and Rising Sun. Starting at 8:30 a.m., shuttles make stops at various trailheads and developed areas, until 7:00 p.m. Fares are $5.00 per person for stops up to Logan Pass, and $10.00 for trips beginning at Apgar Village. Schedules are available at GPI locations and visitor centers in the park.

An early morning Hiker’s Shuttle is available from the Many Glacier Hotel, at 7:30 a.m. to trailheads at Siyeh Bend, Logan Pass, and the Loop.

Backpacking and Hiking Guide Service

Glacier Wilderness Guides offers guided day hikes and backpacking trips into Glacier’s backcountry for one to seven days. Custom trips available. Camping equipment is available for rent at their West Glacier office. For information write Box 535 - PS, West Glacier, MT 59936 or call 406-387-5555 or 800-521-RAFT.

Cash Machines

Automatic Teller Machines (ATMs) are available in West Glacier at the West Glacier Cafe, in Apgar at the Cedar Tree Deli, at Lake McDonald Lodge in the campstore, in St. Mary at the St. Mary Lodge and the Park Cafe Store, at Many Glacier in the Many Glacier Hotel, and in East Glacier at Glacier Park Lodge.

Park Lodging

For advanced lodging reservations, call Glacier Park, Inc. at 602-207-6000 in the U.S. or 403-236-3400 in Canada. For same day reservations call hotel directly.

A wide range of services are available in the communities surrounding Glacier National Park.

Ask for the brochure "Services Adjacent to the Park" at visitor centers throughout Glacier.
A trip over the Going-to-the-Sun Road provides a memorable park experience. Completed in 1932, this 52-mile road combines both history and unparalleled scenery, as it bisects the heart of Glacier. Its construction made the remote backcountry of the park accessible to everyone.

Over time, it became apparent that the road was not designed for the number or size of today’s vehicles. Larger vehicles frequently had difficulty negotiating the sharp corners and often caused considerable traffic delays. To help reduce congestion and to allow for a safe and enjoyable experience, vehicle size restrictions are in effect. Vehicles longer than 21 feet and wider than 8 feet are prohibited between Avalanche Campground and the Sun Point parking area.

To give every visitor the opportunity to experience this engineering marvel, alternative transportation is available. Page 11 lists several options for tours and shuttle service along the road.

### Safe Driving

The roads of Waterton-Glacier International Peace Park offer access to some of the most spectacular mountain scenery in the world. Increase your enjoyment of this area:

- Obey the speed limit at all times.
- Take time to enjoy the views. If more than four vehicles stack up behind you, please use a pullout to let them pass safely.
- Watch out for wildlife along the roads, especially at dusk or at night. Animals often dart out in front of vehicles.
- Please watch for and give the right of way to children and pedestrians.

### Speed Limits

<table>
<thead>
<tr>
<th>Location</th>
<th>Speed Limit</th>
</tr>
</thead>
<tbody>
<tr>
<td>In Waterton Lakes</td>
<td>80 km/hr*</td>
</tr>
<tr>
<td>In the Waterton townsite</td>
<td>30 km/hr*</td>
</tr>
<tr>
<td>In Glacier</td>
<td>45 mi/hr*</td>
</tr>
</tbody>
</table>

*unless otherwise posted.

### Border Crossings

- **Chief Mountain Customs**: May 16 through May 31  9 a.m. to 6 p.m.
  June 1 through Sept. 15  9 a.m. to 6 p.m.
  Sept. 16 through Oct. 30  9 a.m. to 6 p.m.
  Closed Oct. through mid-May, 1997

- **Piegan/Carway Customs**: Year-round  7 a.m. to 11 p.m.
